

# Chapter 2 – Tools & Environment

---

## Introduction

Before writing any HTML code, it is very important to set up the **right tools and working environment**. Good tools make learning easier, reduce mistakes, and help you understand how websites actually work in the real world.

In this chapter, you will learn:

- What tools are required to write HTML
- Best code editors for beginners
- How browsers read HTML files
- How to create and run your first HTML file properly
- Folder structure for websites

This chapter is written in **simple language** and assumes you are a complete beginner.

---

## 2.1 What Do We Need to Learn HTML?

To learn HTML, you do **NOT** need:

- Internet connection all the time
- Costly softwares
- Powerful computer

You only need:

1. A **computer or laptop**
2. A **text editor** (to write code)
3. A **web browser** (to see output)

That's it.

---

## 2.2 Text Editors (Where We Write HTML Code)

A **text editor** is a software where we write our HTML code using tags.
